

ABSTRACT OF THE DISCLOSURE

It is an object of the present invention to implement a display providing high optical efficiency irrespective of the size of a light valve, and capable  
5 of enhancing the uniformity of the luminance of an image to be projected. In order to attain the foregoing object, for example, as shown in FIG. 1, a light valve 103 of a projector is located roughly at the focus point of an illumination lens 102. Further,  
10 as shown in FIG. 2, a light source 101 is also located roughly at the focus point of the illumination lens 102. Consequently, it is possible to implement a miniaturized projector.
